

LG Inform – LGA standard reports

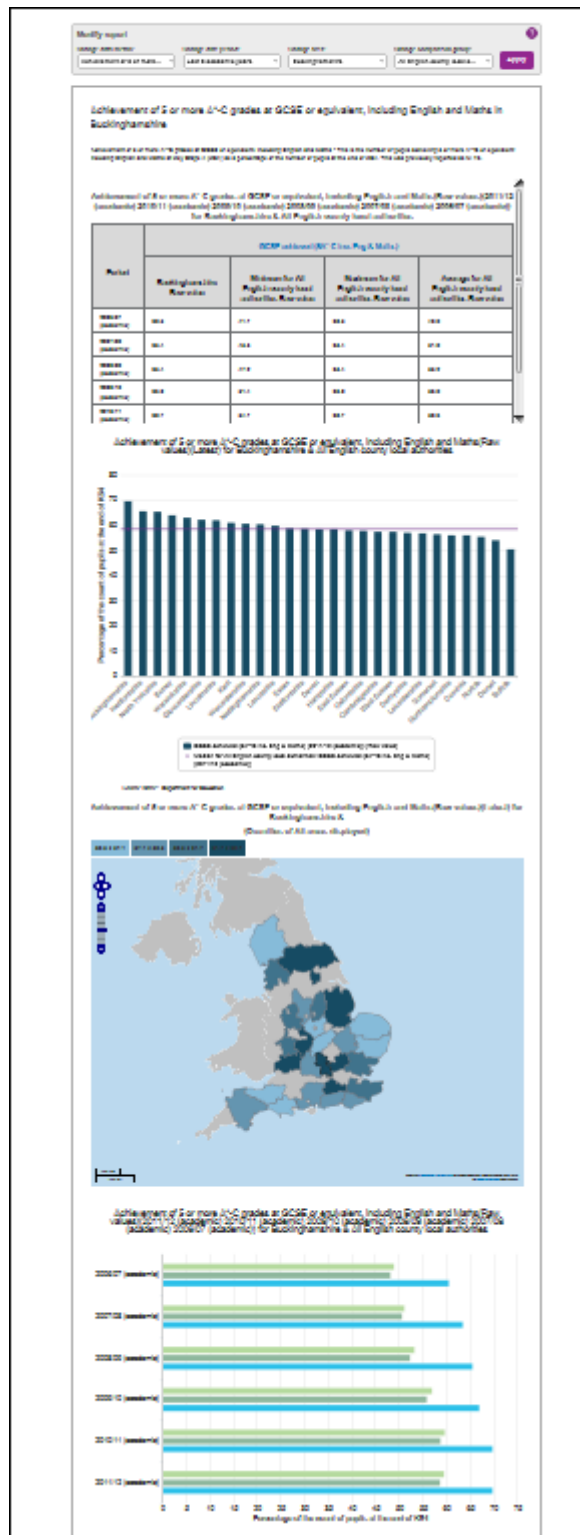

July 2013

LGA standard report

The reports that in the prototype were called detailed metrics view reports are now called LGA standard reports and can be found through the advanced search option.

The LGA standard report looks in detail at a single metric over time and compares this against a named comparison group and presents this in a number of different visualisations. Users are able to change the metric, area and comparison group displayed.

-
- Metric details – this first text box displays a short description of the selected metric, the source of the data and its polarity (whether a high low value is good).
 - Summary over time table – displays the latest six periods of data for your chosen metric and area, shows the quartile group the area belongs in compared to the average, minimum and maximum of the selected comparison group.
 - Single period comparison bar chart – this chart shows the selected area against the a named comparison group overlaid with the comparison group average
 - Single period map – this map shows the selected area against the named comparison group.
 - Multi period comparison bar chart – this chart shows the selected area and comparison group median for multiple periods.
 - Raw data table – this table displays the raw data for all selected areas for a number of periods.

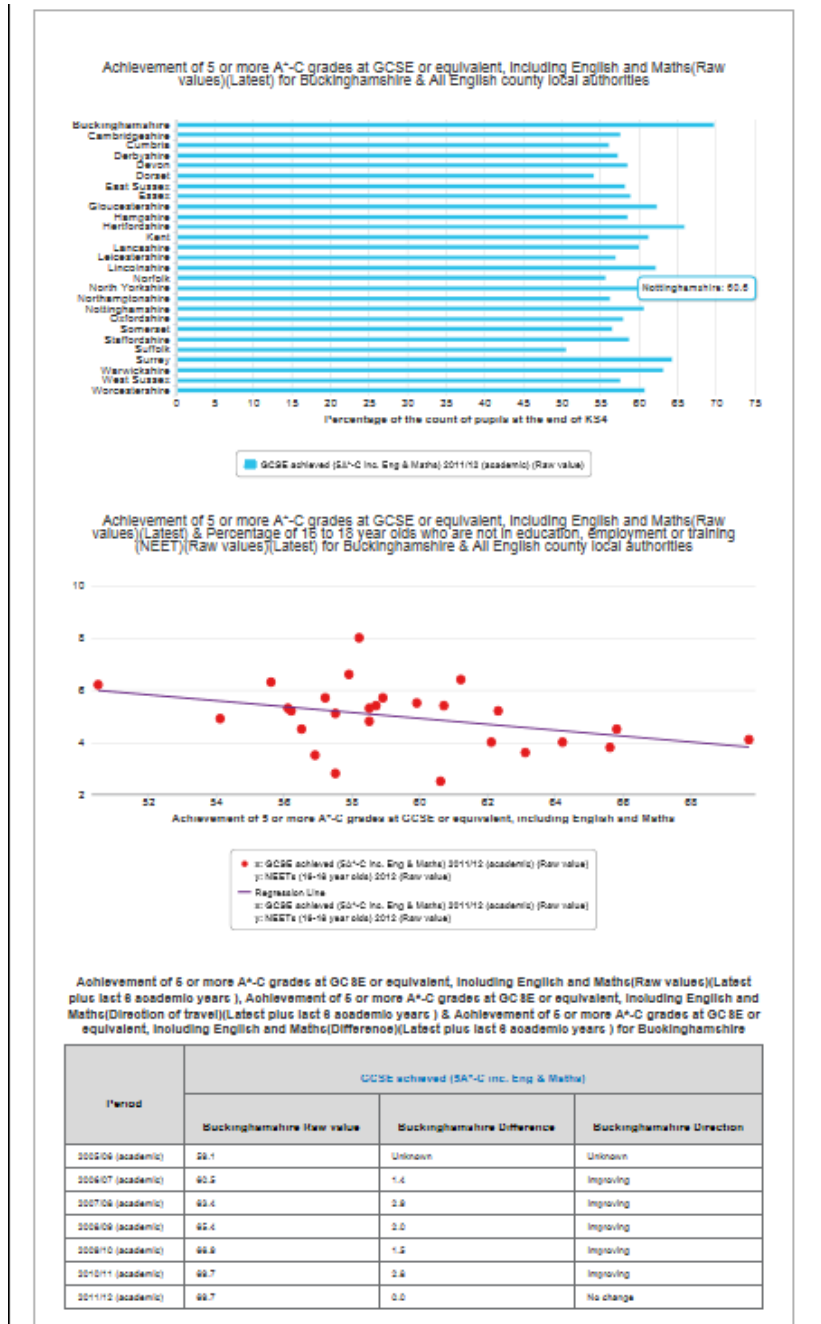

In addition, users can:

- Make LGA standard reports 'favourite' which will add the report to their personal library.
- Print and export the report in a variety of formats.
- Export individual components and download the underlying data.
- Copy the report or individual components for reuse in your own reports.
- Receive notifications when the data in LGA standard reports have been updated or when new reports are created. Notifications received will depend on the areas of interest they have expressed in the Preference tab.

Custom report

Custom report – these are report you have created yourself or have been shared with you. The LGA will over time produce a series of themed reports as examples of the functionality in LG Inform, however and registered user can create a custom reports using the report builder which can include any number of charts, tables or maps the author chooses from the available list:

- Bar charts
- Stacked bar charts
- Line charts
- Pie chart
- Scatter charts
- Box plots
- Radar charts
- Bullet charts
- Gauges
- Bubble charts
- Summary dashboards
- Maps
- Tables

For further information see our 'how to' guide to building reports.
